n8n workflows (myspawn.app.n8n.cloud)

C · GitHub Ads ► Drive Mirror

LIVE

Push webhook ► filter new images in assets/ads/ ► GitHub download ► upload to "Myspawn ads only". Verified Aug 20, 2026.

A · Daily Outreach Sender

WIRING PENDING

Weekdays 19:00 IST: 20 new leads + due follow-ups (day 3, day 7) ► Claude personalization ► Gmail send ► sheet update. CAN-SPAM compliant, 20/day cap.

B · Reply Watcher

WIRING PENDING

How the day chains together

Research feeds content: Trend Radar (13:00) supplies concepts to Deep Production (15:00), Content Factory (17:00), Image Ads (18:00) and the PM run (23:00). Ad Copy Lab angles feed the image agent's no-repeat checks.

Memory prevents repetition: every agent checks its log before producing and updates it after; topics, hooks, formats and concepts are never reused.

Humans hold the only publish button: agents write, render, draft and deliver internally; posting, sending and paid spend always pass Jig or Abhinay. Google Analytics closes the measurement loop once the site tag is installed.

Hourly inbox poll ► match lead ► mark REPLIED (stops follow-ups) ► alert founder.
