

— YOUR DNA KIT

Three steps. Seven minutes.

Welcome to MySpawn. Everything you need to collect and return your sample is in this box. Your legacy starts here.

WHAT'S IN THIS KIT

125 ml Sample Vial

Sterile, sealed, single-use

Return Envelope

Pre-addressed to the vault

INSTRUCTIONS

01 — 03

1

Collect your sample

Wash and dry your hands. Pull **5–10 strands of hair with the roots attached** (pulled, not cut — the root holds the DNA), and clip **3–4 fingernail trimmings**.

2

Seal them in the vial

Drop the hair and nail clippings straight into the vial. Twist the cap until it clicks. Keep it dry — no water or any liquid.

3

Mail it to the vault

Place the vial in the pre-addressed envelope — it routes to GenVault, our independent, FDA-registered, ISO 9001/20387 & CAP-accredited biorepository. Affix postage and post it.

— IMPORTANT

A few things to remember.

RETURN WINDOW

Mail it back within 3 days of your kit arriving.

Fresh samples preserve best — don't let the kit sit in a drawer. It's stable at room temperature; just keep it dry and out of direct sunlight until you post it.

- **Keep it dry**

No water, alcohol, or liquid of any kind in the vial.

- **Roots attached**

Hair must be pulled, not cut — the root carries the DNA.

- **Seal firmly**

Twist the cap until you hear it click shut.

- **We confirm arrival**

You'll get an email the moment your sample reaches the vault.

WHILE YOUR SAMPLE TRAVELS

Seal your first memory in the **Memory Vault** at myspawn.me/vault — and write your free **Letter to 2126**.
